

FLOOR | By affordable floor grinding machinery PREPARATION SIMPLIFIED

Floor preparation and renovation is often a costly and time-consuming process for local contractors who are not aware of the various options available to them. In order to provide a cost-effective and efficient solution to this challenge, Superb Flooring Systems is promoting the new range of competitively priced HTC Greyline floor grinding equipment to the local industry.

Superb Flooring Systems is the exclusive distributor of a wide range of internationally recognised HTC floor grinding and polishing machinery and accessories.

Customer sales support representative Richard Hugh notes that the Greyline series is user-friendly and robust, in addition to being more competitively priced than similar single-speed floor grinders on the market.

"The Greyline series can be used for floor

preparation and renovation in addition to grinding and levelling on both concrete and wooden floor surfaces. The range is becoming increasingly popular with smaller companies due to this versatility, which makes it an all-in-one solution to numerous floor surfaces, simply by changing tools," he explains.

The Greyline series of grinding equipment comes standard in four sizes, namely 270mm, 400mm, 450mm and 550mm. The wide range

of model sizes ensures that smaller contractors can purchase machinery that is ideally suited to their needs and they do not have to make a substantial investment in a larger machine. However, it is important to establish the size of the surface area of floorspace that needs to be ground, before selecting the correct Greyline machine. The larger the area, the larger the grinding machine required.

Superb Flooring Systems conducts free on-site product demonstrations to any company interested in testing the HTC Greyline range, and provides full operator training and comprehensive after-sales service and technical support. ■
